Key Projects

Online Auction Shop   Lovely Professional university
PHP, SQL, HTML, CSS, Bootstrap   *November 2017*
This project aims at creating an Online Auctioning system. Using this web application, one can place an Item for sale providing the item name, description, an image of the item, minimum bid prize etc. The buyers can buy the item by providing a bid amount (which should be greater than the previous bid). User can view the list of orders placed by the him.

Placement Management System   Lovely Professional University
Java, MySQL   *March-April 2016*
Made a Placement Management Portal using JAVA and SQL. It is a GUI based application which can be used for placements related activities like viewing the drives for which user is eligible and registering for interested drives etc.

Math's Quiz   Lovely Professional University
C++   *September 2015*
Made a simple game which will helps children to learn addition, subtraction, multiplication and division of max two-digit numbers. It will first ask the player what he/she want to do between addition, subtraction, multiplication and division and based on players choice it will show two random numbers and ask the result from player and if the value entered would be wrong then it will show the correct answer and again ask the player that he/she wants to continue or not.
