- [Project]
  THE IMPACT OF INFORMATION TECHNOLOGY ON
  SUPPLY CHAIN PERFORMANCE,

[Project Results Statement] - Research Project
The results from the study indicate that the adoption of information technology
in supply chain management is generally high, but there is still room for

improvement. Respondents recognized the benefits of real-time visibility and optimization in transportation and logistics. The study highlights the positive impact of IT on supply chain management and provides insight into the value. Fero.Ai brings to logistics and supply chain. Overall, the study aims to explore and analyse how IT can be leveraged to improve SCM practices, identify challenges and opportunities in implementing IT solutions, and assess IT impacts performance, cost and customer satisfaction in the supply chain. The results can be used to make recommendations on IT adoption and integration into supply chain strategies to gain competitive advantage and achieve business goals.

- AN AHMEDABAD BASED STUDY OF HOW MORDENTECHNOLOGY WILL CHANGE THE WAY OF TEACHING IN FUTURE

- [Project Results Statement]
- The conclusion gathered through the results of this survey is that most students feel that technology and information systems in education are great assets. These technologies have grown in education to a large extent and have become one of the pillars in the development of education for the 21st century. Although technology and information systems are accompanied with some disadvantages, the advantages for education are greater and becoming more noticeable. Information systems and technology in education are rapidly growing and have become part of the foundation for education for the years to come. Many of our assumptions were accurate, showing that from the students surveyed most feel that technology is indeed wanted and needed in education. Having looked at the results of this survey, we would say that technologies be integrated into the educational environment as they point to having a positive effect rather than the negative effect assumed. The use of technology in an educational environment would have a very positive effect on the learning experience. It appears that future generation is extremely receptive to utilizing new technology and as a matter of fact, they appear to embrace it.

- However, e-Learning does not come without its limitation.

After our analysis we came up with some major concerns with regarding learning into educational environment: - Immense expenditure, Insufficient method of teaching.

- Waste of valuable time.
- Misguided by wrong information.
- Major sources of distractions.
- Creative enough room for cheating.
- Extinct of good handwriting.
- Partial to low-income group.
- Replacing books with e-books.

Technology can reduce the tremendous effort given by students to gather number of printed book and journals for acquiring knowledge and increase students' focus on more important knowledge gathering process. Equally important, technology can represent education in ways that help students understand latest concepts and ideas. The Education Technology also enables teachers to integrate project-based learning. With guidance from effective teachers, students at different levels can use these tools to construct knowledge and develop skills required in modem society such as presentation skills and analytical skills.

Skills

Teamwork and Collaboration	Time management
Active Listening	Flexible and Adaptable
Dependable and Responsible	Cultural Awareness

Professional experience summary

Fresher

- Demonstrated leadership skills in managing projects from concept to completion.
- Worked well in a team setting, providing support and guidance.

- Proven ability to learn quickly and adapt to new situations.
- Delivered services to customer locations within specific timeframes.
